Attention: Mr. Brian Wilkinson

**RE: NEW DISTRIBUTION CENTER FOR SICO-AKZONOBEL  
LONGUEUIL, QC  
FOLIO 05164**

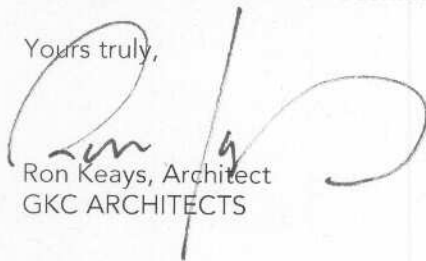

To Whom It May Concern:

We are the architects of the new 200,000 s.f. facility for Sico-AkzoNobel in Longueuil, Québec. This project consists of specialized warehouses for latex and alkyd paint and coating products produced and distributed by Sico-Akzonobel as well as administrative offices and employee services. The building has been designed and built to achieve LEED certification.

Part of the energy saving features of the project is the solar air heating collectors. We chose the MATRIX Air™ System not only for its energy savings benefits, but also for its simplicity of operation and ease of integration into the architectural and engineering plans for the building. Matrix Energy staff contributed to the smooth progression from system conception to installation.

We have no hesitation in recommending and using the Matrix Air™ System in our future projects.

Yours truly,

Ron Keays, Architect  
GKC ARCHITECTS
